

Molibra, the Opinion as a Service (OaaS) Blockchain

Verifiability of public opinion, the “Data-Toalha” case and the urgency of a legal framework for the media in Brazil

Abstract

This paper classifies Molibra, a mined public network launched on 29 August 2026 (chain 20226), as an Opinion as a Service (OaaS) blockchain: an infrastructure in which each expression of opinion is unique per wallet and per question, the choice remains blinded and the count can be verified by anyone, without trusting the publisher. It describes the expression protocol (the GIZ token), the network’s development context and the author’s trajectory. It formulates the thesis that the opinion of people in general is a service to the development of the social fabric, which the legal framework (*marco legal*) must assure through positive-secular (*laicidade positiva*) and libertarian principles. The thesis is applied to the “Data-Toalha” case, in which a street scoreboard imitating DataToalha is alleged to have been presented as a poll during the 2026 presidential campaign, a matter under investigation by the Ministério Público Federal (Federal Public Prosecutor’s Office). An analysis of the Brazilian normative framework and of the composition of the Congress elected on 4 October 2026 supports the view that media regulation has been produced by courts and by the Executive, and that only a law on a positive-secular and libertarian basis, with no prior censorship and with public proof of origin, stands a chance of gathering a majority in a fragmented Parliament.

Keywords: blockchain; public opinion; social fabric; positive secularism; verifiability; freedom of expression; media regulation; electoral disinformation.

Resumo

Este artigo classifica a Molibra, rede pública minerada lançada em 29 de agosto de 2026 (cadeia 20226), como uma blockchain de Opinião como Serviço (*Opinion as a Service*, OaaS): uma infraestrutura em que cada expressão de opinião é única por carteira e por pergunta, a escolha permanece cega e a contagem pode ser verificada por qualquer pessoa, sem confiança no publicador. Descrevem-se o protocolo de expressão (o token GIZ), o contexto de desenvolvimento da rede e a trajetória do autor. Formula-se a tese de que a opinião das pessoas em geral é um serviço ao desenvolvimento do tecido social, serviço que precisa ser assegurado no marco legal por princípios laico-positivos e libertários. A tese é aplicada ao caso “Data-Toalha”, em que se alega que um placar de rua que imitava o DataToalha foi apresentado como pesquisa durante a campanha presidencial de 2026, fato sob apuração do Ministério Público Federal. A análise do quadro normativo brasileiro e da composição do Congresso eleito em 4 de outubro de 2026 sustenta que a regulação das mídias tem sido produzida por

tribunais e pelo Executivo, e que só uma lei de base laico-positiva e libertária, sem censura prévia e com prova pública de origem, tem chance de reunir maioria num Parlamento fragmentado.

Palavras-chave: blockchain; opinião pública; tecido social; laicidade positiva; verificabilidade; liberdade de expressão; regulação de mídias; desinformação eleitoral.

1 Introduction

Public opinion is measured every day by polling institutes, media outlets, platforms and, increasingly, by informal tallies that circulate on social networks. In almost all of them, whoever reads the number has to trust whoever publishes it. When the count is imitated, inflated or presented as something it is not, the reader has no way of checking it.

This paper makes three contributions. First, it describes Molibra and classifies it as an Opinion as a Service (OaaS) blockchain, defining what this class of network offers (Section 2). Second, it presents the author’s thesis that the opinion of people in general is a service to the development of the social fabric, which the legal framework (*marco legal*) must assure through positive-secular (*laicidade positiva*) and libertarian principles, and applies it to a concrete case from the 2026 election (Sections 4 and 5). Third, it examines the normative framework and the composition of the new Congress in order to propose principles for a single legal framework for social and traditional media (Sections 6 to 8).

The facts of the “Data-Toalha” case are treated as allegations. No one has been convicted, and the investigation is a matter for the Ministério Público (Public Prosecutor’s Office).

2 Molibra: architecture and expression protocol

2.1 The network

Molibra is a public, open-source blockchain (Apache-2.0), compatible with Ethereum keys, transactions and wallets (MOLIBRA, 2026b). Table 1 summarises its parameters.

Table 1: Parameters of the Molibra network (October 2026).

Parameter	Value
Chain identifier	20226
Coin	MOLI (18 decimal places)
Consensus	Proof of work (Keccak-256), 15 s target block time
Initial issuance	None: the genesis block reserves no balance for anyone; no pre-sale and no ICO
Reward	2 MOLI per block; halving every 5,640,000 blocks ($\approx$ 4 years); permanent floor of 0.05 MOLI
Finality	Reorganisations limited to 128 blocks and never below the height anchored on Ethereum; also timestamped on Bitcoin
Interoperability	Bridge to Ethereum (bMOLI), in both directions; EVM virtual machine
Services operator	American Ltd, t/a Xpirit AI (England and Wales, No. 11138952)

No one owns the network: anyone can run a node and mine. On 9 October 2026 there were at least five full nodes and independent miners in addition to the operator’s (MOLIBRA, 2026a). The value of the coin is uncertain: it may be worth zero, it may be worth billions, and nobody knows — not even the authors.

2.2 The expression protocol (GIZ)

The opinion service lies in GIZ, the “giz do quadro” (“chalk for the board”), live since 5 October 2026 (block 149,548). GIZ is neither sold nor transferred: it is issued by whoever publishes a question and burned when used. Speaking costs no MOLI (MOLIBRA, 2026c). Each expression follows four steps:

1. The person performs a few seconds of computational work in the browser and receives GIZ. Uniqueness is enforced by cost, not by identity.
2. They record a zero-value transaction to themselves, whose data field contains the protocol tag, the question identifier and a cryptographic commitment to the choice. The choice itself does not go on chain.
3. The network keeps in its state the key

$$k = H(\text{wallet} \parallel \text{question}), \quad (1)$$

and rejects any second expression with the same key.

4. Anyone can count:

$$\text{expressions} = \text{GIZ issued} - \text{GIZ remaining}, \quad (2)$$

and verify that each wallet spoke only once, without seeing what it said.

2.3 Properties and limits

The protocol guarantees uniqueness per wallet and per question, secrecy of the choice and a verifiable count. It does not guarantee resistance to coercion: whoever has expressed an opinion keeps a receipt that third parties may demand, a limitation acknowledged in the repository itself (MOLIBRA, 2026b). Molibra records opinions; it has no legal effect and is not a voting system (MOLIBRA, 2026c).

Each question declares its purpose — market, consumer behaviour, social communication, public expression of purchase, or electoral. The electoral rule reaches GIZ and the questions it carries, not the network, the coin, the bridge or mining.

2.4 Classification: Opinion as a Service

We propose to call an Opinion as a Service (OaaS) blockchain a network that offers, as a public service and without a trusted intermediary, four properties: (i) uniqueness of expression per participant and per question; (ii) secrecy of the choice; (iii) a count verifiable by third parties; and (iv) a declared purpose for each question. Molibra has all four. The service does not consist in saying what people think, but in proving, to whoever doubts it, that the count was not inflated.

3 Development context and the author's trajectory

3.1 The origin recorded in the genesis block

The genesis block immutably records the origin of the idea: the DataToalha phenomenon, attributed to the think tanks Povo Candidato and Movimento Libertário do Brasil; the co-authorship of the World Spiritual Responsibility Organization (WSRO) and of Spiritual Responsibility AI; and the theoretical basis in libertarian theory — voluntary participation, preference revealed through action, no privileged verifier — and in Macrobiotic Quantum Theory (MQT) (MOLIBRA, 2026b). DataToalha is an application running on the network; the network serves anyone who wishes to use it.

Table 2: Milestones in the development of Molibra (2026).

Date	Milestone
29 Aug.	Version 0.1, “cadeia pública de auditoria” (“public audit chain”); GIZ and user tokens
31 Aug.	EVM; MOLI market; first anchor on Ethereum; first crossing of the bridge
1 Sep.	Public exchange and token factory
3 Sep.	molibra.org portal and Moliscan explorer
6 Sep.	Listing in the chainlist registry
9–10 Sep.	Issuance on Bitcoin’s four-year clock; timestamp on Bitcoin
24–25 Sep.	bMOLI→MOLI return path; miner installers for Windows and Mac
5 Oct.	GIZ live on chain
8 Oct.	Home page in 16 languages; legal page; peer discovery; miner 1.1 with signed releases
9 Oct.	Title “The Opinion as a Service (OaaS) Blockchain”

3.2 The author’s trajectory

The author comes to Molibra after three decades spanning technology, music and religious mission (Table 3).

“MC” goes back further than hip-hop: it is the *magister caerimoniarum* of royal courts, the master of ceremonies who announces the arrival of the bridegroom. For the author, a Seventh-day Adventist, the name describes the mission of announcing the return of Jesus.

4 Opinion as a service to the development of the social fabric

The central thesis of this paper is that the opinion of people in general — of every citizen, on any matter of common interest — is a service rendered to the development of the social fabric. By giving an opinion, a person hands the community a piece of information that no authority possesses: what that person thinks, prefers and rejects. It is from the sum of these that society learns about itself, corrects its mistakes and chooses its course. Opinion, therefore, is not noise to be managed by the State; it is a contribution to be protected.

For this service to develop the social fabric, rather than degrade it, three conditions are necessary:

1. **Freedom.** Opinion is expressed without fear, without licence and without prior censorship. A fabric in which people fall silent no longer knows what it thinks.
2. **Authenticity.** An opinion belongs to someone, is given once, and its count is not inflated. Fabricated opinion — or rigged measurement — does not serve the social fabric: it poisons it.
3. **Response through debate.** Error is corrected with more opinion; threats and fraud are dealt with in the courts, after the fact.

These conditions do not sustain themselves. They must be assured by the legal framework, resting on two pillars:

- **Libertarian principles:** voluntary participation, preference revealed through action and no privileged verifier; intervention by power only to prevent harm to others (MILL, 1859); trust in the competition of ideas (HOLMES, 1919); and, against bad speech, more speech, not enforced silence (BRANDEIS, 1927).

Table 3: Trajectory of Marcelo Marshall De Siqueira (MC Jesus).

Year	Milestone
1996	Scholarship from Milton Afonso, founder of Golden Cross, to study Data Processing at an Adventist institution, at a time when most Brazilians had neither a computer nor internet access
1999–2007	Colporteur for the Seventh-day Adventist Church, largely in the Amazon region
2004	Delivery of the proposal “Soberania de Jesus” (“Sovereignty of Jesus”) to President Lula
2005	Registration of the book <i>Inesquecível Astronauta (Unforgettable Astronaut)</i> at the Biblioteca Nacional (National Library); videos such as “Jesus Copyright” (1 Cor 11:1), amid the worldwide debate on copyright on the internet
2006	Presentation of the WSRO to candidates; meeting with Al Gore at AmCham, in São Paulo
2007–2015	France and Europe; return to Brazil in 2015
2016–2017	Mechatronics Engineering; teaching degree in Music, which is where the name “MC Jesus” comes from
2018	“O Joio e o Trigo” (“The Tares and the Wheat”), on spiritual responsibility in society
2020	“O Vírus do Batman” (“Batman’s Virus”), released on 12 April, about a month after the start of the pandemic
2023	Announcement, on 30 January, of an independent protest candidacy against the left–right dichotomy; Constitutional Manifesto of the Diarchy
2024	Cybersecurity; start of the papers on MQT
2026	Xpirit AI (company and LTLM, a sovereign AI built from scratch), IAgente, Data-Toalha, Scientific Church, TV Adventista, Legal Family and Molibra

- **Positive secularism (*laicidade positiva*):** the State neither adopts nor combats beliefs and does not arbitrate the truth of convictions, but recognises and protects the contribution of all of them — religious or not — to public debate. It is a neutrality that includes, not a neutrality that excludes.

Molibra turns the second condition into infrastructure: on an Opinion as a Service blockchain, no one needs to trust the publisher to know that each opinion belongs to someone and was counted only once. The first and third conditions depend on the law, and they are the subject of the sections that follow.

5 The “Data-Toalha” case

5.1 The original DataToalha

DataToalha was born in 2022 among street vendors in São Paulo and Rio de Janeiro: each towel sold bearing a candidate’s name became a stroke on the scoreboard. The phenomenon was reported by the international press, including the Associated Press, AFP and Al Jazeera, and returned to Avenida Paulista in the 2024 municipal elections. The trade mark is registered in the United Kingdom (UK00004045382) and has a pending application at the INPI (Instituto Nacional da Propriedade Industrial, Brazil’s National Institute of Industrial Property; case 922.412.871). The scoreboard shows customers’ public expression of purchase, each person counts once, and the notice at the point of sale states that it “não constitui pesquisa eleitoral nem mede intenção de voto” (“does not constitute an electoral poll nor measure voting intention”).

5.2 The allegations

According to the submission (*manifestação*) filed with the Ministério Público Federal (Federal Public Prosecutor's Office):

- since June 2026, a vendor on Alameda Lorena, in São Paulo, has been displaying a “Data-Toalha” scoreboard that he himself calls a “poll” (*pesquisa*); each item purchased is worth one point, and a single purchase of 17 towels allegedly counted as 17 points; there is no record of it in the PesqEle system of the TSE (Tribunal Superior Eleitoral, Superior Electoral Court);
- on 25 May 2026 the owner of DataToalha warned the then pre-candidate Renan Santos by direct message; on 4 June the candidate visited the stall and was recorded saying “Eu autografo umas 10 pra valer mais” (“I’ll sign about ten so it counts for more”);
- outlets and channels began reporting that he “dispara no Data-Toalha” (“is surging on Data-Toalha”), and the scoreboard was publicised as a “poll”;
- in audio recordings of 25 June, attributed to the vendor, there is talk of “alterar o placar” (“changing the scoreboard”) with the candidate’s shirts;
- the vendor worked for DataToalha in the 2024 elections and, after receiving an extrajudicial notice, refused to stop.

Selling towels is not unlawful, and that is not what is being alleged. What is alleged is that someone who knew the genuine DataToalha would have taken part in a false scoreboard, presented as a poll and favourable to a candidate. Law 9.504/1997, art. 33, § 4.º, makes the publication of a fraudulent poll a crime (BRASIL, 1997). Renan Santos ran in the first round on 4 October 2026, obtained 2.24% of the valid votes and is not taking part in the second round (ELEIÇÃO..., 2026).

5.3 Action taken

On 29 September 2026 the author brought the case before the Ministério Público Federal, addressed to the Procuradoria-Geral Eleitoral (Office of the Prosecutor-General for Electoral Matters), with a request for confidentiality; the proceeding was sent on to the Procuradoria Regional da República da 3.^a Região (Regional Federal Prosecutor's Office for the 3rd Region). On 1 October, a note of repudiation was delivered to 1,075 recipients in Brazil and, in six languages, to the outlets that covered DataToalha in 2022. The request is for a full investigation: who planned, took part in, financed and publicised it.

5.4 The gap revealed

Between the warning of 25 May and the submission of 29 September, four months of campaigning went by, and no mechanism dispelled the confusion between a consumption indicator and an electoral poll. For the author, it is this gap — and not a lack of censorship — that calls for legislation.

6 The Brazilian normative framework

Brazil regulates public speech through successive layers (Table 4).

Bill PL 2.630/2020 has been stalled since April 2024 (PROJETO..., 2026). Bill PL 4.675/2025 deals with competition between large platforms, not with content, and its

Table 4: Main instruments on expression and the media in Brazil.

Instrument	Year	Content
Constitution, arts. 5 and 220	1988	Freedom of expression, anonymity prohibited; reply proportional to the grievance; all censorship of a political, ideological or artistic nature prohibited (BRASIL, 1988)
STF, ADPF 130	2009	Press Law (Lei 5.250/1967) held not to have been received by the 1988 Constitution (STF: Supremo Tribunal Federal, Federal Supreme Court) (BRASIL, 2009)
Law 13.188	2015	Right of reply in any outlet or platform; request within 60 days (BRASIL, 2015)
Criminal Code, arts. 138–141	2019	Calumny, defamation and insult; penalty tripled on social networks (MIGALHAS, 2021)
STF, Themes 987 and 533	2025	Art. 19 of the Marco Civil da Internet (Brazil’s Internet Civil Rights Framework) partially and progressively unconstitutional: liability after notice, presumption for paid content and artificial networks, duty of care; court order still required for crimes against honour (CONJUR, 2025)
Law 15.211 (ECA Digital)	2025	Age verification and protection of minors, in force since March 2026 (PODER360, 2026)
TSE, Res. 23.732 and 23.755	2024–26	Mandatory labelling of AI; ban on deepfakes; prohibition of synthetic content in the 72 hours before polling day (MIGALHAS, 2026)
Decrees 12.975 and 12.976	2026	Oversight of large platforms by the ANPD (National Data Protection Authority); challenged in Congress (CNN BRASIL, 2026b)

vote was postponed until after the parliamentary recess (O TEMPO, 2026b). The STF’s thesis on art. 19 applies until Congress legislates. The rules applied today to speech on social networks were, therefore, written by courts and by the Executive.

The case in Section 5 exposes two gaps. The electoral rule protects the registered poll, but does not define what a street scoreboard, a consumption indicator or a count made by a brand is. And the right of reply serves whoever has been offended, not whoever had their brand used to produce a false measurement.

7 Political alignments and the new Congress

The Congress elected on 4 October 2026 has no defined majority. In the Câmara dos Deputados (Chamber of Deputies), no party controls the House on its own, and without the *centrão* (the bloc of centrist parties) neither PT nor PL can form a majority (JORNAL DE BRASÍLIA, 2026). Table 5 shows the largest caucuses.

In the Senate, PL elected 19 senators and will hold 28 seats from 2027 onwards (AGÊNCIA BRASIL, 2026). A survey cited by the Terra portal counts 44 senators in the Bolsonaroist bloc, 24 in the government camp and 13 independents; a constitutional amendment requires 49 votes (TERRA, 2026).

The alignments for the second round (25 October) reflect the same fragmentation. As of 8 October, Novo, União-PP and Republicanos had declared support for Flávio Bolsonaro; PT, PCdoB, PV, PSB, PDT, PSOL and Rede support Lula; PSD declared itself neutral, and MDB and PSDB left their members free to choose (O TEMPO, 2026a). Lula is seeking personal endorsements among *centrão* leaders (METRÓPOLES, 2026b).

Table 5: Largest caucuses elected to the Câmara dos Deputados (99.99% of ballot boxes counted) (CNN BRASIL, 2026a).

Party or federation	Deputies (out of 513)
PL	121
PT-PCdoB-PV	88
União-PP	87
PSD	43
Republicanos	41
MDB	36

The signs of intransigence are explicit. A senator elected for PL stated that the priorities of the caucus are the impeachment of a justice of the STF and the amnesty (ESTADO DE MINAS, 2026); the party rejects any “acórdão” (“grand bargain”) (CNN BRASIL, 2026c). The government and its base are opposed to the amnesty (CORREIO BRAZILIENSE, 2026). The race for the presidencies of both Houses in 2027 is already under way (METRÓPOLES, 2026a). On social networks, one side calls regulation censorship — “o que o governo não pode fazer é transformar a crítica em delito” (“what the government cannot do is turn criticism into an offence”) (GAZETA DO POVO, 2026a) — and the other calls it accountability, promising “regulamentação democrática das plataformas digitais e da IA” (“democratic regulation of digital platforms and AI”) (GAZETA DO POVO, 2026b).

With two blocs that will not give way and a centre that decides case by case, a media law that depends on the defeat of one of the sides will not pass. What will pass is a law that both can defend.

8 Proposal: principles for a legal framework for the media

To assure people’s opinion as a service to the social fabric (Section 4), the author proposes six principles on a positive-secular and libertarian basis for a single law, applicable to both social and traditional media:

1. **No prior censorship.** The State does not judge opinion; the remedy for bad speech is more speech (BRANDEIS, 1927).
2. **Liability only for harm to others.** Proven fraud, false facts that destroy a person, and threats are answered for afterwards, in the courts (MILL, 1859).
3. **Public proof of origin.** Whoever presents a count as public opinion, within or outside the electoral period, discloses how the count was made and allows it to be checked. The law requires the proof, not a state registry of opinions; a public ledger such as Molibra is one of the ways of complying with it.
4. **The same rule for all media.** Newspapers, television, radio, social networks and apps answer under the same criterion, as Law 13.188 already does for the right of reply.
5. **Positive secularism.** The State neither arbitrates beliefs nor favours any faith, but recognises the contribution of all convictions to public debate; religious and non-religious speech enjoy the same protection and are subject to the same limits.
6. **Rapid reply in the digital sphere.** The correction reaches the same audience, in the same medium, within days and not months.

Foreign models show the extremes. In the United States, Section 230 holds platforms almost wholly unaccountable (UNITED STATES, 1996). The European Union imposes systemic risk assessments but prohibits general monitoring (EUROPEAN UNION, 2022). The United Kingdom has handed the duties to a regulator (UNITED KINGDOM, 2023). The proposal combines American freedom of opinion with European accountability for fraud, and adds what none of the three models has: public proof of origin.

9 Conclusion: the author's rise and the legacy of Milton Afonso

The student who received a scholarship from Milton Afonso in 1996 to learn Data Processing now carries the name of Jesus to the highest places, and it is in this way that he consolidates, on the international stage, the legacy of the man who believed in him. Milton Soldani Afonso, founder of Golden Cross and an Adventist philanthropist, died on 2 September 2026, aged 104. He listened to the author's raps and called him a genius.

Table 6: Where the name of Jesus has reached.

Year	Milestone
2004	The proposal "Soberania de Jesus" ("Sovereignty of Jesus") reaches President Lula
2006	The WSRO is presented to candidates; Al Gore comes to meet the author at AmCham, in São Paulo
2019	"Cidadania de Jesus" ("Citizenship of Jesus") is taken to the Palácio do Planalto (the Presidential Palace)
2025	On 31 July, the Constitutional Manifesto of the Diarchy is presented to the Secretary-General of the UN
2026	Molibra is born with the WSRO as co-author in the genesis block, and the 2025 manifesto becomes the first entry in its document registry; this article, in 16 languages, becomes entry no. 3

Molibra closes the circle. A network in which each person's opinion counts once, can be checked by anyone and does not depend on the word of whoever publishes it is the technical answer to what the "Data-Toalha" case exposed. It is also the political answer the author proposes to Brazil: neither censorship nor a lawless land, but clear rules of accountability and tools that make it possible to verify the truth. The opinion of people in general is a service to the development of the Brazilian social fabric; what is asked of Congress is a legal framework that assures it through positive-secular and libertarian principles: free, authentic and someone's own.

Registration and authentication on the Molibra network

The first edition of this article, in 16 languages, is authenticated on Molibra in the same way as the Manifesto to the United Nations (record no. 1): a single DocumentRegistry record covers every language. The record is the SHA-256 of the file MANIFEST.txt, which lists the SHA-256 of each PDF (Table 7).

To check it, download the PDFs and MANIFEST.txt from <https://molibra.org/articles>. The command `sha256sum -c MANIFEST.txt` checks every PDF, and the manifest's SHA-256 must be record no. 3, which the page <https://molibra.org/molibra/documents> reads directly from the chain.

This second edition, in Portuguese and English, adds only this section and the mention of the record in Table 6. Because its bytes differ, it is not covered by record no. 3: it is

Table 7: Registration of the first edition in the DocumentRegistry (Molibra, chain 20226).
